

Tyler Mayberry

AI-NATIVE SYSTEMS BUILDER | WORKFLOW AUTOMATION | INTERNAL TOOLS | PRODUCT-MINDED FULL-STACK BUILDER

Tulsa, OK / Remote
Email: tyler@animasai.co
Phone: (405) 921-2818
LinkedIn: <https://www.linkedin.com/in/mayberrydt/>
GitHub: <https://github.com/MayberryDT>
Portfolio: <https://tylermayberry.dev>
Animas AI: <https://animasai.co>
Pip: <https://spendwithpip.com>
Work authorization: U.S. Citizen

PROFESSIONAL SUMMARY

AI-native technical generalist who turns messy real-world workflows into practical software, internal tools, automation, dashboards, and product prototypes. Strongest fit is work that sits between product, operations, customer context, and implementation: understanding the workflow, talking to the people doing the work, using modern AI/software tools well, and shipping something concrete.

Background spans AI systems contracting, self-directed product building, hospitality operations, automotive systems testing, ecommerce operations, sales/copywriting, teaching in Japan, and electronics repair. Known strengths include fast learning, high tolerance for ambiguity, customer empathy, systems thinking, practical implementation, agentic AI workflows, and the ability to make vague work executable.

TARGET ROLES AND SEARCH KEYWORDS

AI Automation Builder, AI Systems Builder, AI-Native Product Builder, Forward-Deployed AI Engineer, AI Implementation Specialist, Product Engineer, Product-Minded Full-Stack Developer, Internal Tools Developer, Workflow Automation Developer, Technical Operations Generalist, Implementation Specialist, Solutions Engineer, Customer-Facing Technical Problem Solver, Developer Tooling Engineer, Platform/Internal Tools Engineer, AI Operations, Technical Product Manager, Product Manager, Data/Analytics Generalist, Business Systems Analyst, Support Engineer, Customer Success Engineer, Technical Program Manager.

CORE SKILLS

AI and agentic systems: AI-agent orchestration, AI-assisted software development, AI coding agents, agent workflows, agent dashboards, agent status monitoring, agent spawning/orchestration UI, prompt/tool boundaries, deterministic tool boundaries for AI systems, typed AI interaction surfaces, memory/task systems, MCP-style services, OpenAI API, OpenAI Agents SDK, Responses API, Anthropic API, Gemini API, Google GenAI, HeyGen API, ElevenLabs API, Gemini transcription/processing, HeyGen avatar/video workflows, ElevenLabs voice/audio workflows, Veo / Google Flow, AI video/content workflows.

Software and web development: Next.js, React, TypeScript, JavaScript, Node.js, Python, HTML, CSS, PHP, Vite, Express, API routes, SQL, SQLite, SQLite FTS5, Supabase, PocketBase, Plaid, Stripe, Resend, Netlify, Zod, Vitest, Playwright, TanStack Query, Zustand, React Hook Form, Tailwind CSS, shadcn/Radix UI, Git, GitHub, worktree-based development, deployment coordination, Linux, SSH, Docker basics, Docker/deployment scripts, Windows, VMware, networking fundamentals.

Product and operations: workflow automation, internal tools, operational dashboards, process mapping, product prototyping, product judgment, customer-facing troubleshooting, implementation planning, documentation, testing and verification, CRM/pipeline tracking, cold email, cold calling, B2B sales, ecommerce operations, marketplace operations, contractor coordination, supplier/order tracking, spreadsheet operations, Excel, Google Workspace, Office, WordPress.

Hospitality and customer operations: hotel operations, bar management, food and beverage operations, guest communication, service recovery, conflict resolution, loyalty programs, PMS systems, Opera PMS, Cloudbeds, FOSSE, front desk operations, high-pressure multitasking, team coordination, sales/service judgment.

Teaching and communication: curriculum development, ESL teaching, cross-cultural communication, conversational Japanese, pronunciation coaching, presentation creation, technical explanation for nontechnical users.

PROFESSIONAL EXPERIENCE

AI Systems Contractor - Brander Group

December 2025-present

- Develop AI systems and internal operational tooling for Brander Group, working inside NDA-sensitive systems that must be described publicly only at a high level.

- Contribute to an internal AI-enabled operations platform with agent workflow tooling, automation, monitoring, content workflow surfaces, project workflow surfaces, prototype workflow surfaces, Git/deploy support, and operational dashboards.
- Use AI coding agents as a core development workflow: shaping implementation paths, inspecting code, debugging issues, verifying behavior, and shipping practical changes across a modern TypeScript stack.
- Translate ambiguous AI-operations goals into concrete implementation steps, helping turn broad product and operations ideas into working internal tools.
- Work with technologies and patterns including Next.js, React, TypeScript, Tailwind, Zustand, TanStack React Query, API routes, Node, Python, Git workflows, Docker/deploy scripts, and process/deployment tooling.
- Maintain discretion around private client systems, internal data, repository details, operational details, screenshots, logs, and implementation specifics.

Founder / AI Automation Builder - Animas AI

August 2023-present

- Build AI-assisted product prototypes, workflow automations, internal tools, and practical software systems under the Animas AI brand.
- Use AI coding agents and modern AI tools to move quickly through unfamiliar codebases, reason about product/system design, create implementation paths, debug issues, verify behavior, and ship usable tools.
- Built Pip, an AI-native spending companion centered on Spendable Cash Today, one daily spending signal supported by agent-assisted explanation and action.
- Designed Pip so deterministic application logic owns financial calculations and account state while the agent explains context, routes intent, helps with setup, and presents approved action surfaces.
- Built Pip with Next.js, React, TypeScript, Tailwind, Supabase, Plaid, OpenAI agent tooling, Netlify, Zod, Vitest, Playwright, API routes, typed app surfaces, and careful read-only financial-data boundaries.
- Built public product and app surfaces for Pip with trust-aware positioning: read-only account data, no money movement, no ads/data-selling language, no financial-advice claims, deterministic financial logic, and agent-assisted user interaction.
- Built Nova OS / Central Brain, a private AI workflow infrastructure prototype combining a Next.js dashboard, agent-network controls, and a SQLite-backed MCP-style memory/task service.
- Designed agent memory and task models using structured records, tags, links, verification concepts, full-text search, project overviews, agent overviews, follow-up workflows, and curated context instead of raw transcript dumps.
- Created Executioner, a deployed personal execution-system prototype with React/TypeScript app architecture, onboarding/access-key concepts, Supabase-backed product concepts, AI-assisted planning, email/provisioning concepts, audio transcription, and deterministic scheduling logic.
- Built and explored AI product prototypes across personal productivity, hospitality workflows, credit workflow tracking, paycheck review, consumer diagnostic quizzes, AI video tooling, and operational dashboards.
- Integrated and experimented with practical AI/API systems including OpenAI, Anthropic, Gemini / Google GenAI, HeyGen, ElevenLabs, Plaid, Supabase, Stripe, Resend, Netlify, and AI coding agents.
- Built public portfolio projects and prototypes across productivity, hospitality, credit workflow, AI media, operations dashboards, games, and consumer tools.
- Developed public-facing technical/product materials for Animas AI, Pip, and portfolio projects, including case studies, product positioning, architecture explanations, and public-safe project summaries.

Bar Manager / Hotel Experience Champion - Highgate Hotel Management / Holiday Inn

November 2022-present

- Manage high-pressure hospitality operations requiring customer-facing communication, multitasking, conflict resolution, service judgment, reliability, and fast context switching.
- Manage and coordinate a team of 5 while supporting bar, guest-experience, front-desk, and hotel operations across changing daily conditions.
- Improved loyalty recognition from below 50% to above 80% and helped the team reach 1st/2nd place placements in IHG monthly enrollment challenges.
- Increased guest satisfaction by 22%, improved overall service scores by 18%, maintained a 98% complaint resolution rate, and contributed to a 15% year-over-year RevPAR increase.
- Built practical empathy for frontline workflows, guest communications, PMS systems, loyalty programs, bar/F&B operations, and the messy operational problems that benefit from better tooling.
- Developed strong experience calming difficult customer situations, communicating clearly with nontechnical people, and solving operational issues without perfect instructions.

Freelance Copywriter and Sales Consultant

December 2021-September 2023

- Generated income through freelance copywriting, email marketing, and sales consulting work for small businesses and online offers.

- Conducted cold email and cold calling, managed client acquisition cycles, handled follow-up, and tracked prospects through CRM/pipeline workflows.
- Built practical understanding of customer acquisition, messaging, market feedback, sales operations, and the difference between useful product work and pure marketing work.
- Learned that long-term fit is strongest on the technical systems, product, and workflow-building side rather than pure sales or marketing.

Software Systems Engineer - Panasonic Automotive Systems of America

September 2020-December 2021

- Supported automotive media/navigation system testing through hands-on electronics work, hardware troubleshooting, component replacement, practical issue diagnosis, and testing-team support.
- Replaced and modified automotive electronics, identified and solved hardware issues, and communicated status across teams and branches.
- Managed branch inventory, updated internal databases, and maintained inventory/status visibility through email, spreadsheets, and company systems.
- Worked inside email- and Excel-heavy operational workflows, developing firsthand understanding of coordination overhead and internal-tooling opportunities.

Owner - Shirokuma / Ice Bear Digital

June 2018-July 2019

- Built and operated an ecommerce and digital-services business that reached over \$200,000 in revenue and approximately \$15,000/month profit at peak.
- Coordinated a team of 4 contractors across customer service, product research, and listing-writing workflows.
- Used marketplace listing/research tools, spreadsheets, supplier/order tracking, contractor workflows, and API-driven marketplace/process automation.
- Expanded into web development and SEO services, gaining practical experience with WordPress, small-business sales, platform risk, and operational process design.
- Learned how to build and operate a real revenue-generating system from scratch, coordinate people, and use tools/processes to scale beyond solo capacity.

Head of International Marketing and Web Development - Rentry Inc.

June 2019-September 2019

- Maintained an international website with HTML, CSS, and PHP.
- Supported outreach to foreign travelers in Japan through direct contact, Instagram ads, Google Ads, and GIMP-created graphics.
- Combined web maintenance, international marketing, and cross-cultural communication in a short-term Japan-based role.

ESL Teacher / Tutor - Japan

Selected teaching work, 2018-2020

- Created original curriculum and presentations for English learners across a wide age range, including Pre-K, elementary students, junior high students, and high school students.
- Taught through Shinshu University Faculty of Education, Azumino Afterschool English Program, and AtoZ Corporation.
- Delivered teacher-facing lessons on increasing English usage in classrooms and focused on natural speaking, pronunciation, and communication.
- Ran and assisted classrooms, school events, and conversation groups, building strong cross-cultural communication skills through Japan-based teaching and tutoring.

Server / Bartender - Oaks Country Club And Cedar Ridge Country Club

December 2022-August 2023

- Served food and drinks to club members in member-facing hospitality environments.
- Opened and closed bar operations independently, served drinks, and created cocktails served by the club.
- Strengthened customer service, multitasking, service judgment, and food/beverage operations experience.

Lead Technician - CPR Cell Phone Repair

June 2013-July 2015

- Managed storefront responsibilities and repaired electronics including phones, iPhones, laptops, and related consumer devices.
- Built practical phone hardware knowledge through hands-on repair work and customer-facing technical troubleshooting.
- Developed an early price-suggestion/haggler application for the storefront.

■ SELECTED PROJECTS AND PRODUCT BUILDS

Pip - AI-Native Spending Companion

Links: <https://spendwithpip.com>, <https://spendwithpip.com/app>, <https://animasai.co/pip.html>

- Built an AI-native spending companion that turns account context into one daily spending signal: Spendable Cash Today.
- Designed the product around the user moment before spending, reducing a broad personal-finance problem into one number plus an agent instead of another crowded dashboard.
- Built with Next.js, React, TypeScript, Tailwind, Supabase, Plaid, OpenAI agent tooling, Netlify, Zod, Vitest, Playwright, route handlers/API routes, and typed app surfaces.
- Separated deterministic financial logic from AI interaction so application tools own account state and calculations while the agent explains, routes, helps with setup, and presents approved actions.
- Positioned the product around read-only account data, no money movement, no ads/data-selling language, non-advice framing, and careful consumer trust boundaries.

Mission Control - Internal AI Operations Platform

- NDA-sensitive Brander Group work described only at a high level.
- Contributed to an internal AI-enabled operations platform with agent workflow tooling, automation, monitoring, content/project/prototype workflow surfaces, and deployment/process support.
- Worked in a modern stack including Next.js, React, TypeScript, Tailwind, Zustand, TanStack React Query, Node, Python, Docker/deploy scripts, and Git/worktree workflows.
- Demonstrates ability to work in complex, evolving AI operations systems while preserving confidentiality.

Nova OS / Central Brain - Agent Memory And Workflow Infrastructure

- Built a private AI workflow infrastructure prototype that gives agents durable project memory, task context, retrieval tools, and an operational dashboard instead of relying on isolated chat sessions.
- Combined a Next.js/React/TypeScript dashboard, agent-network control surfaces, SQLite-backed memory/task storage, MCP-style tools, full-text search concepts, tags, links, verification, project overviews, and agent overviews.
- Modeled durable context as structured records such as facts, decisions, incidents, fixes, project statuses, archives, events, and follow-up tasks.
- Demonstrates agentic systems design, schema thinking, retrieval flows, internal tools, privacy-aware architecture, and AI-operations product judgment.

Executioner - AI-Assisted Execution System

- Built a deployed personal execution-system prototype that turns messy brain dumps into structured outcomes and schedule-ready work.
- Created product flows for onboarding, access keys, settings, brain dumps, outcome cards, history, rescheduling, buckets, playbooks, feedback, and execution review.
- Used React, TypeScript, Supabase, Stripe concepts, Resend concepts, Gemini, access-key auth concepts, audio transcription, brain-dump processing, and deterministic scheduling logic.
- Designed the system so LLM output is treated as a proposal while deterministic rules own sizing, schedule constraints, lifecycle state, and final review.
- Demonstrates full-stack product architecture, AI-assisted workflow design, product voice, onboarding, billing/customer portal concepts, email/provisioning concepts, and practical lessons about building versus distribution.

Relationship Pattern Diagnostic / Quiz

- Built a consumer diagnostic-flow prototype in the relationship niche using structured questions and AI-generated reports.
- Explored free/paid report flows, analytics, payment experiments, quiz UX, personalization, TikTok tracking, Supabase integration, Gemini integration, and consumer AI product thinking.
- Stack includes Vite, React, TypeScript, Supabase, Gemini, Stripe, Zustand, Vitest, and React Markdown.

Julian Control Panel / HeyGen API Panel

- Built a browser-based control panel concept for AI avatar/video-generation workflows using the HeyGen API.
- Designed around API-driven creative operations, setup controls, transparent request logging, and an interface understandable to non-specialists.
- Explored security-minded client-side workflows including browser-memory or encrypted localStorage API key handling, transparent network request logs, and strict Netlify CSP concepts.
- Demonstrates AI media workflows, API integration, browser UI, trust/transparency design, HeyGen, ElevenLabs, Gemini transcription/processing, and AI video experimentation.

Credit Workflow Dashboard And Credit Tools

- Built public-safe credit workflow prototypes that turn messy credit/dispute processes into structured steps, status, checklists, dashboards, timeline events, and review flows.
- Modeled entities, cases, phases, deadlines, confidence, import/export flows, and operational timeline states.
- Demonstrates structured workflow/product thinking around complex document-heavy processes while using fake/demo data only and avoiding legal or financial advice claims.

Paycheck Sanity Checker

- Built a lightweight AI-powered paycheck review prototype using Node, Express, Google GenAI, and serverless deployment concepts.
- Turned a confusing manual pay-stub review process into structured intake, decision points, and a plain-English user flow.
- Demonstrates practical AI document/review tooling, worker-facing product thinking, form UX, and LLM integration using fake/demo data only.

Hospitality Workflow Prototypes / InnTouch

- Created hospitality workflow prototypes translating hotel operations into simple internal-tool and guest-experience surfaces.
- Used frontline domain knowledge around guest handling, operational handoffs, cash/accounting awareness, incident workflows, loyalty programs, and hotel communications.
- Demonstrates ability to map real business operations before building AI automation or internal tools around them.

App Portfolio And Public Project Index

- Built and maintained a public portfolio of product prototypes and experiments across AI tools, hospitality concepts, credit workflows, paycheck review, relationship diagnostics, games, productivity tools, and operational dashboards.
- Public repository and project themes include JavaScript, TypeScript, Python, PHP, HTML, React, Next.js, Vite, Supabase, Netlify, workflow automation, dashboards, AI integration, and product prototypes.

Rat Detective Online

- Built a playable 3D noir multiplayer browser game prototype using Vite, TypeScript, Three.js, cannon-es, and socket.io-client.
- Implemented or explored dynamic movement, cheese projectile systems, ragdoll physics, low-poly city, procedural rat combinations, player controller, rat entity/model, network manager, city generation, and level map concepts.
- Demonstrates creative technical range, 3D/browser prototyping, game systems, and fast experimentation.

Additional Prototypes And Experiments

- Invoice Escalator: business operations / document/PDF generation concept using Next.js, React, TypeScript, date-fns, jsPDF, and lucide.
- Warboard Dashboard: React/TypeScript dashboard and UI proof.
- Restaurant Sim: hospitality simulation/modeling concept with customer manager, economy manager, event log, staff manager, world map, and renderer.
- Archivist Wilds: 3D procedural world / physics experiment using Vite, Three.js, Rapier 3D, simplex-noise, terrain, water, sky, biome, chunk, and horse-controller concepts.
- Decree of War: LLM-driven command/game interface using Vite, React, Phaser, command parser, LLM bridge, command console, resource HUD, thought stream, game scene, map, and pathfinding concepts.
- Server Automation: local Windows file-share automation using PowerShell/batch and Python HTTP server concepts to serve a local folder to an isolated phone on a LAN with privacy-focused documentation.

■ DOMAIN KNOWLEDGE

AI-agent workflows, AI coding agents, practical AI implementation, internal tools, workflow automation, operational dashboards, customer-facing troubleshooting, hospitality/hotel operations, bar and food/beverage operations, front desk workflows, PMS systems, guest communications, loyalty programs, ecommerce and marketplaces, contractor coordination, supplier/order tracking, credit disputes and credit workflow tracking, personal finance spending-behavior product systems, personal productivity/execution systems, AI media/video workflows, ESL/language learning, Japan and cross-cultural communication, small business operations.

■ EDUCATION

Oklahoma State University

Bachelor's Degree, University Studies Focus/coursework: Management Science and Information Systems Minor: Japanese August 2011-May 2017

- Active in the Japanese Student Association for approximately 3 years.
- Served as Japanese Student Association president during final semester.
- Supported incoming Japanese students and helped run cultural/language exchange events.

■ CERTIFICATIONS AND LANGUAGES

- CompTIA A+
- TEFL
- Native English
- Conversational Japanese; strongest in everyday conversation and cross-cultural communication

■ ADDITIONAL JOB-MATCHING KEYWORDS

AI implementation, applied AI, agentic AI, AI operations, automation, workflow automation, internal tools, product engineering, full-stack development, frontend development, technical implementation, solutions engineering, customer success, support engineering, technical operations, business systems, dashboards, APIs, SaaS, startup, product management, technical product management, data workflows, SQL, database fundamentals, SQLite, Supabase, React, Next.js, TypeScript, JavaScript, Python, Node.js, Tailwind, Netlify, Plaid, Stripe, Resend, OpenAI, Anthropic, Gemini, HeyGen, ElevenLabs, MCP, memory systems, task systems, LLM APIs, prompt engineering, agent orchestration, testing, Playwright, Vitest, Zod, GitHub, Linux, SSH, Docker, hospitality tech, hotel operations, PMS, Opera PMS, Cloudbeds, FOSSE, ecommerce, marketplaces, CRM, sales operations, cold outreach, copywriting, ESL, Japanese, cross-cultural communication, electronics repair, automotive systems, hardware troubleshooting, inventory management, spreadsheet operations, customer service, team management, conflict resolution, service recovery.

■ CLAIM BOUNDARIES

- Brander Group / Mission Control work is NDA-sensitive and should stay high-level.
- Pip should be described as read-only, finance-adjacent, and centered on deterministic financial logic plus agent-assisted explanation/action. Do not describe it as a bank, financial adviser, money-movement product, or guarantee-oriented "safe to spend" tool.
- Credit workflow projects are workflow/product prototypes and should not be framed as legal or financial advice.
- AI coding agents are a core modern development workflow for Tyler, but the strongest framing is AI-native builder/operator with practical product and systems judgment, not a conventional narrow senior software engineer identity.
